

VOYAGEUR MOVES TO ADVANCE UPGRADE OF P'FOLIO SYSTEMS

MINNEAPOLIS-based Voyager Asset Management has taken a further step toward completing an upgrade of its portfolio management and accounting systems. The firm late last year installed Sungard Investment Systems Inc.'s Unix-based Invest One. Voyager will use Invest One to support investment portfolios associated with 40 of its mutual funds—a group that comprises \$3.1 billion in assets. These funds represent a subset of the total \$8.1 billion in assets Voyager maintains.

At Voyager, the Unix-based Invest One system has been deployed in a mixed environment. While the firm has opted to account for the 40 funds using Sungard's system, it remains committed to Thomson Investment Software's Portia for front-office portfolio management.

Prior to deploying Invest One locally, Voyager accounted for the 40 funds via Sungard's service-bureau version of the same system.

At the same time, a source close to the installation says Voyager
